

Process Runner success in Financial Services

A Leading Financial Services Company that is made up of a number of finance companies, that has grown organically, with companies with diverse technology platforms, uses Process Runner to speed implementation, and for long term data maintenance.

One of the data integration issues that this Leading Financial Services Company faced was getting massive amounts of initial data from a new company that needed to be loaded in to common financial systems.

This company researched the data automation tools on the market, and used the evaluation trial licenses of products to review examples from the web, before settling on Process Runner and opting for some specific training on a few key SAP transactions, including FB50 and FB01. During the evaluation and demo phase, Process Runner met the company requirements, including:

- Innowera was very pro-active with providing help and information
- The product licensing is flexible
- Process Runner met the Budget requirements
- Process Runner met all of the data integration functionality

After initial training, setting up the recordings and then making modifications and changes were very simple. This company estimates that their implementation team saved 3-4 weeks by using Process Runner to load their financial journals during their last implementation. It is also very important for this company to keep their DEV, QA, and Production systems in synch, and Process Runner is used to ensure this process.

This company has been very pleased with the support received from Innowera. During the initial test process of moving from the test environment to the production, the company team planned the move over the weekend, and ran into an issue on Friday night that was quickly solved because the company had access to Innowera members cell phones, and the weekend implementation was successful as scheduled.

About Process Runner

Innowera Process Runner - Designed for business user, dramatically reduces on-going costs and optimizes efficiencies by automating day-to-day data maintenance and migration operations between your SAP and Microsoft Excel and other data systems.

With proven technology, built-in the best practices and expert support service, Process Runner provides easy to use and deploy SAP data management system. Process Runner enables deep SAP automation capabilities and usually provides ROI in a few weeks to few months. Contact us today for a demo or a free evaluation copy. Client comment:

"We saved 3-4 weeks' worth of man hours by using Process Runner when we implemented the new company's accounts migration leading to increased accuracy and reduced processing times.."

About Process Runner

Innowera's Process Runner dramatically reduces on-going costs and optimizes efficiencies by automating day-to-day data maintenance and migration operations between your SAP and Microsoft Excel, Access, SharePoint, various popular Databases and other systems.

With proven technology, built-in best practices and expert support service, Process Runner provides a best-in-class SAP data management system. Process Runner enables deep SAP automation capabilities and usually provides ROI in a few weeks to few months. Free evaluation copy of Process Runner can be downloaded from Innowera's website.

About Process Runner – Data Extractor

Process Runner Data Extractor module offers extremely easy to use, graphical drag and drop interface to download data from thousands of SAP tables and views to Microsoft Excel, Text or MS-Access or other popular databases.

Data Extractor provides powerful filtering criteria that can use user inputs as well as Excel data as a filter. Built in scheduler can be used to schedule period data extracts without user intervention. Data Extraction technology also deals with usual SAP time-outs faced by larger data extract.

Data Extractor is also seen as an alternative to SE16, SE16N, SE17 or custom table browser Tcodes that is usually granted to end users.

Data Extractor works out of the box and does not need anything to be installed in your SAP system. It complies with existing SAP security and usually no additional steps are necessary. Access to SE16/17 is not required but table level security is complied with automatically. One can download and start extracting the data in less than an hour.

Other modules of Process Runner extend capability to download data from SAP query, Quick Views, logical database, reports or spool. The end result is extremely easy but controlled access to information that is required to run day to day business in SAP.

About Innowera

Innowera makes SAP easier for users on all levels of business by simplifying complex problems and driving efficiencies via automation. Innowera's Process Runner dramatically reduces total cost of ownership (TCO) of SAP systems.
